**DISTANCE LEARNING WITH
DIGITAL PROXIMITY**

ACADEMIC/ SCHOLASTIC CHALLENGES

In the new era for schools across the globe, what could be the best format for distance learning and online teaching?

For Students: class participation on recitation, quizzes, long tests, and usual homeroom activities are what learners got used to for interactive learning

For Teachers: classroom management from administering grade on tests and assignments as well as being able to plan lesson allows focus on their goal on mentoring

Whether due to pandemic related lockdowns or because it is the wave of the future, it is but timely to find a solution that addresses the needs of what it means to be in school.

EXISTING SOLUTIONS

Popular tools that sprouted in the current pandemic and those proprietary that have been all along available in the market can only do so much.

Because:

Real-time attendance indicators is not present for teachers to track students who are participating or inactive during sessions, hence missing out on the **unified digital learning experience**

Un**secured connectivity** for most that relies on Virtual Private Network (VPN) that at times are slow and will not work if internet is not working at full speed

Tendency to be hacked by anyone with a meeting link, username, and password since these are meant for business or personal meetings and not for school purpose, making **secured communication** unattainable.

Absence of attendance tracking which is basic for school administration purposes is not aligned to **academic compliance**

TekMonks have been disrupting the IT industry by offering cutting edge solutions in everything from Teleworking to custom built software. Consistent in bringing innovative software solutions, TekMonks have addressed concerns from administrators, teachers, and students to optimize online learning via **Telescholr**.

Telescholr

A photograph of four diverse students sitting around a table in a classroom or meeting room. They are looking at laptops and papers, appearing to be in a collaborative learning session. The lighting is soft and modern.

Telescholr is a fully
customizable and intuitive
software solution for
digital learning

Telescholr

The only fully integrated Digital School platform in the market. Made ground up for running learning institutions digitally.

What sets Telescholr apart from other online learning platforms is the ability to:

- *curate the platform to meet school's requirements,*
- *provide a secure learning environment,*
- *track students, and*
- *deliver reliable online managed school*

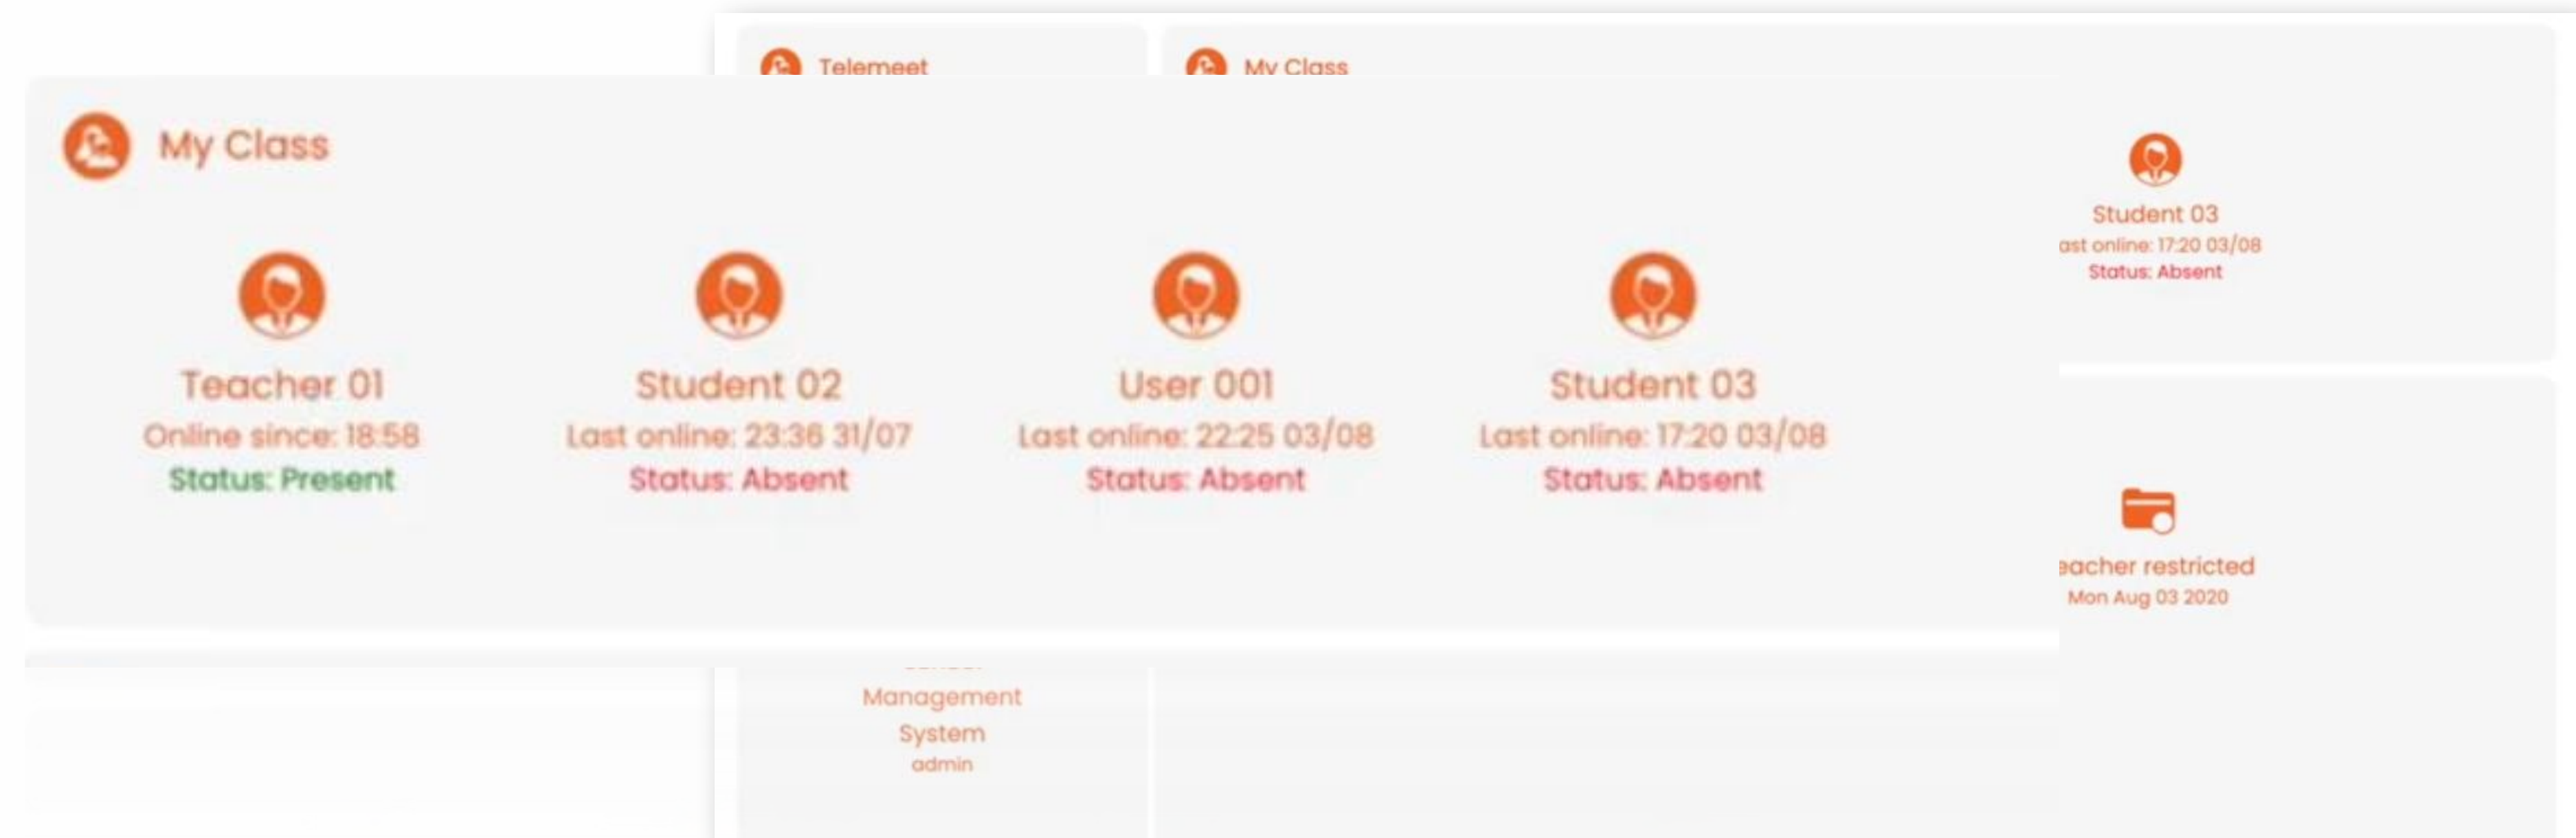

KEY FEATURES

Accountability through My Class and telepresence

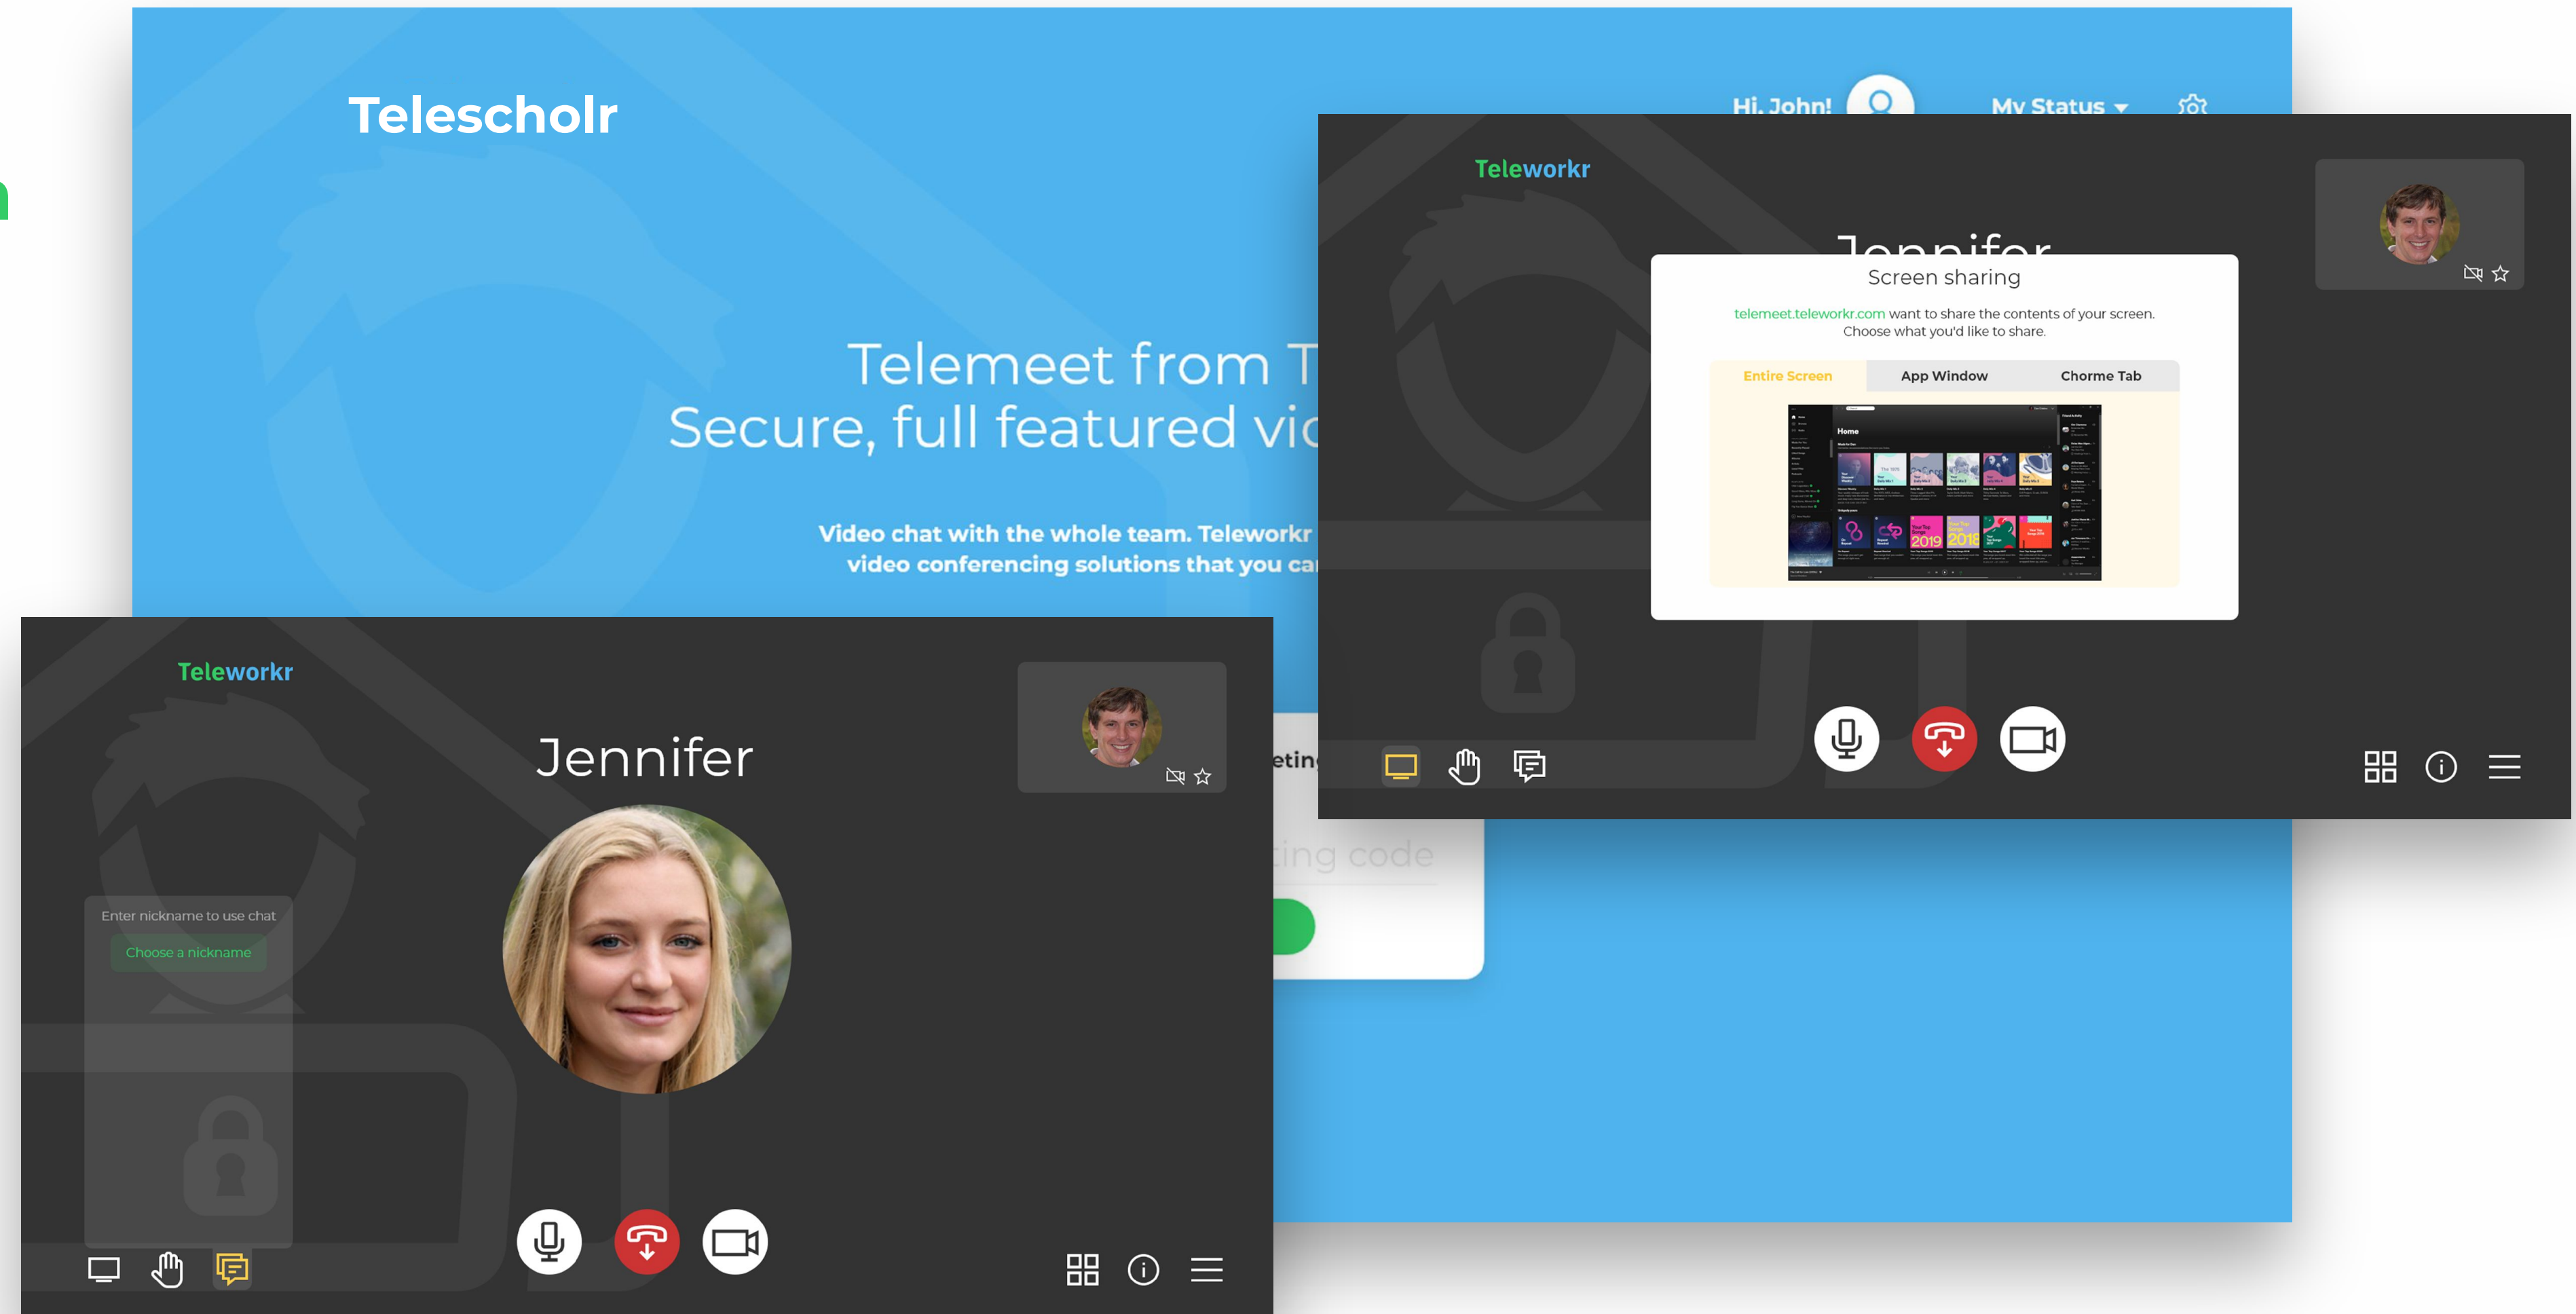

Unified digital learning experience

Both teachers and students have transparency where everyone can see each other via Telepresence – just like a physical classroom

Secured Communication

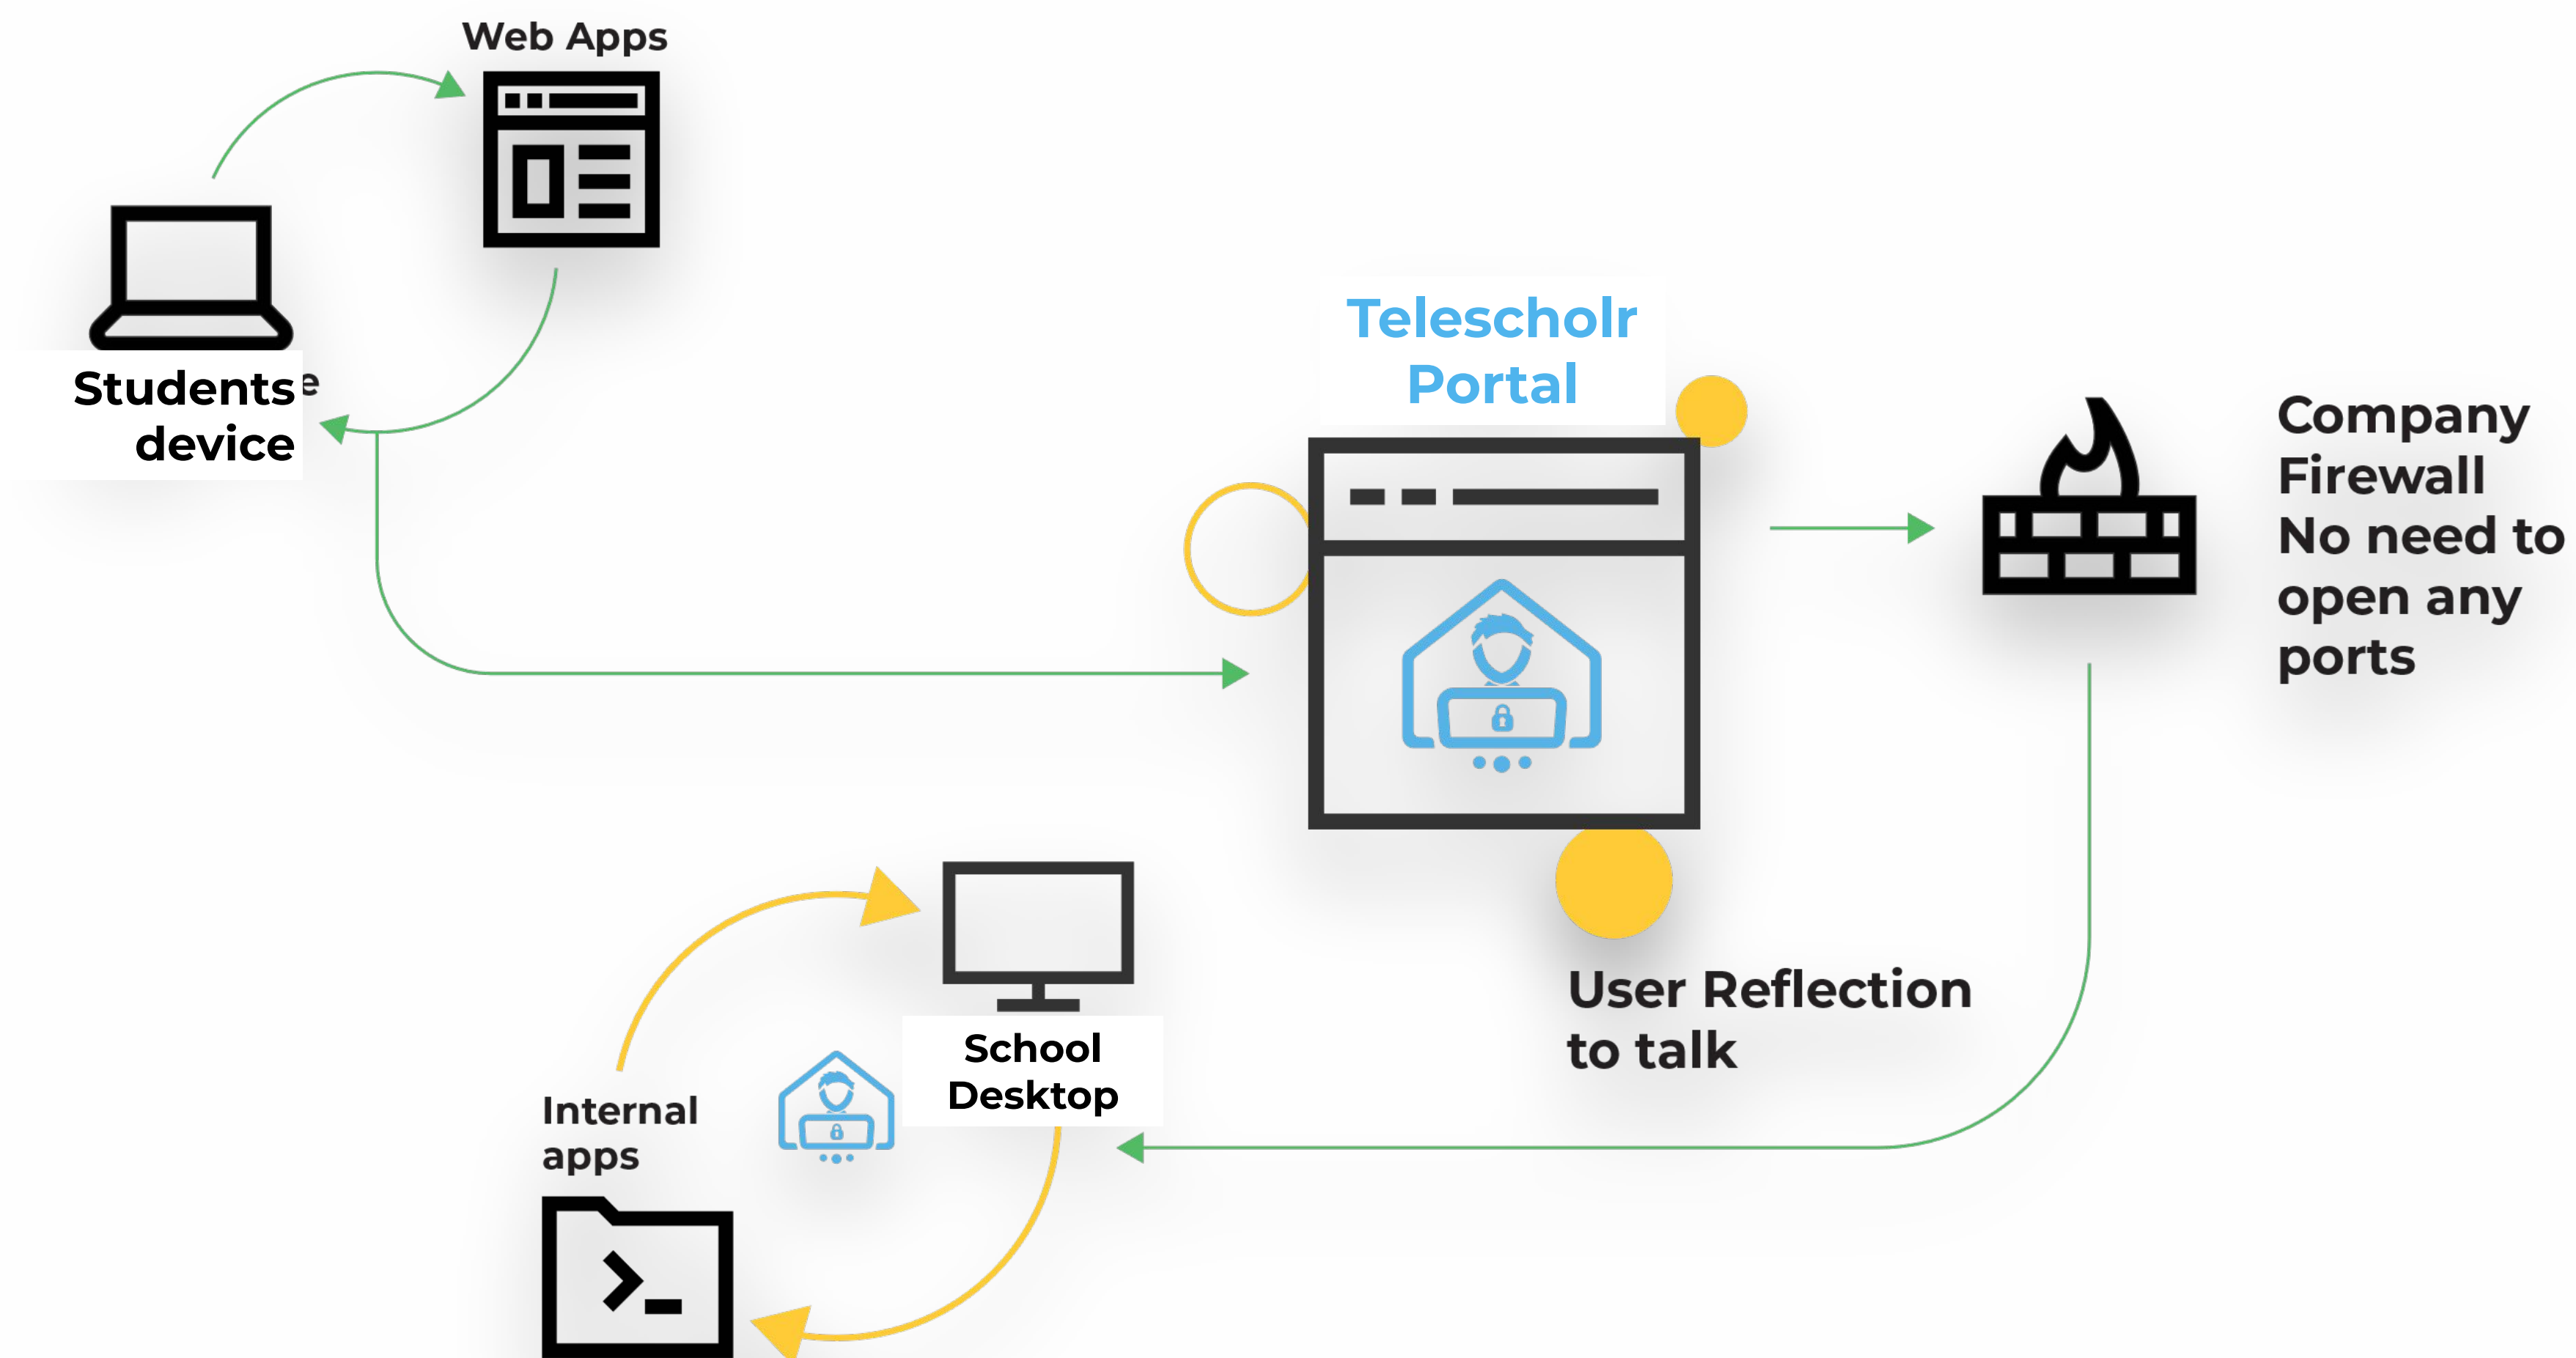

**Built-in
communication
via Telemeet**
**Secured video
conferencing,
chat, and file
sharing
accessible only
to those who
are part of the
class**

Secured Connectivity

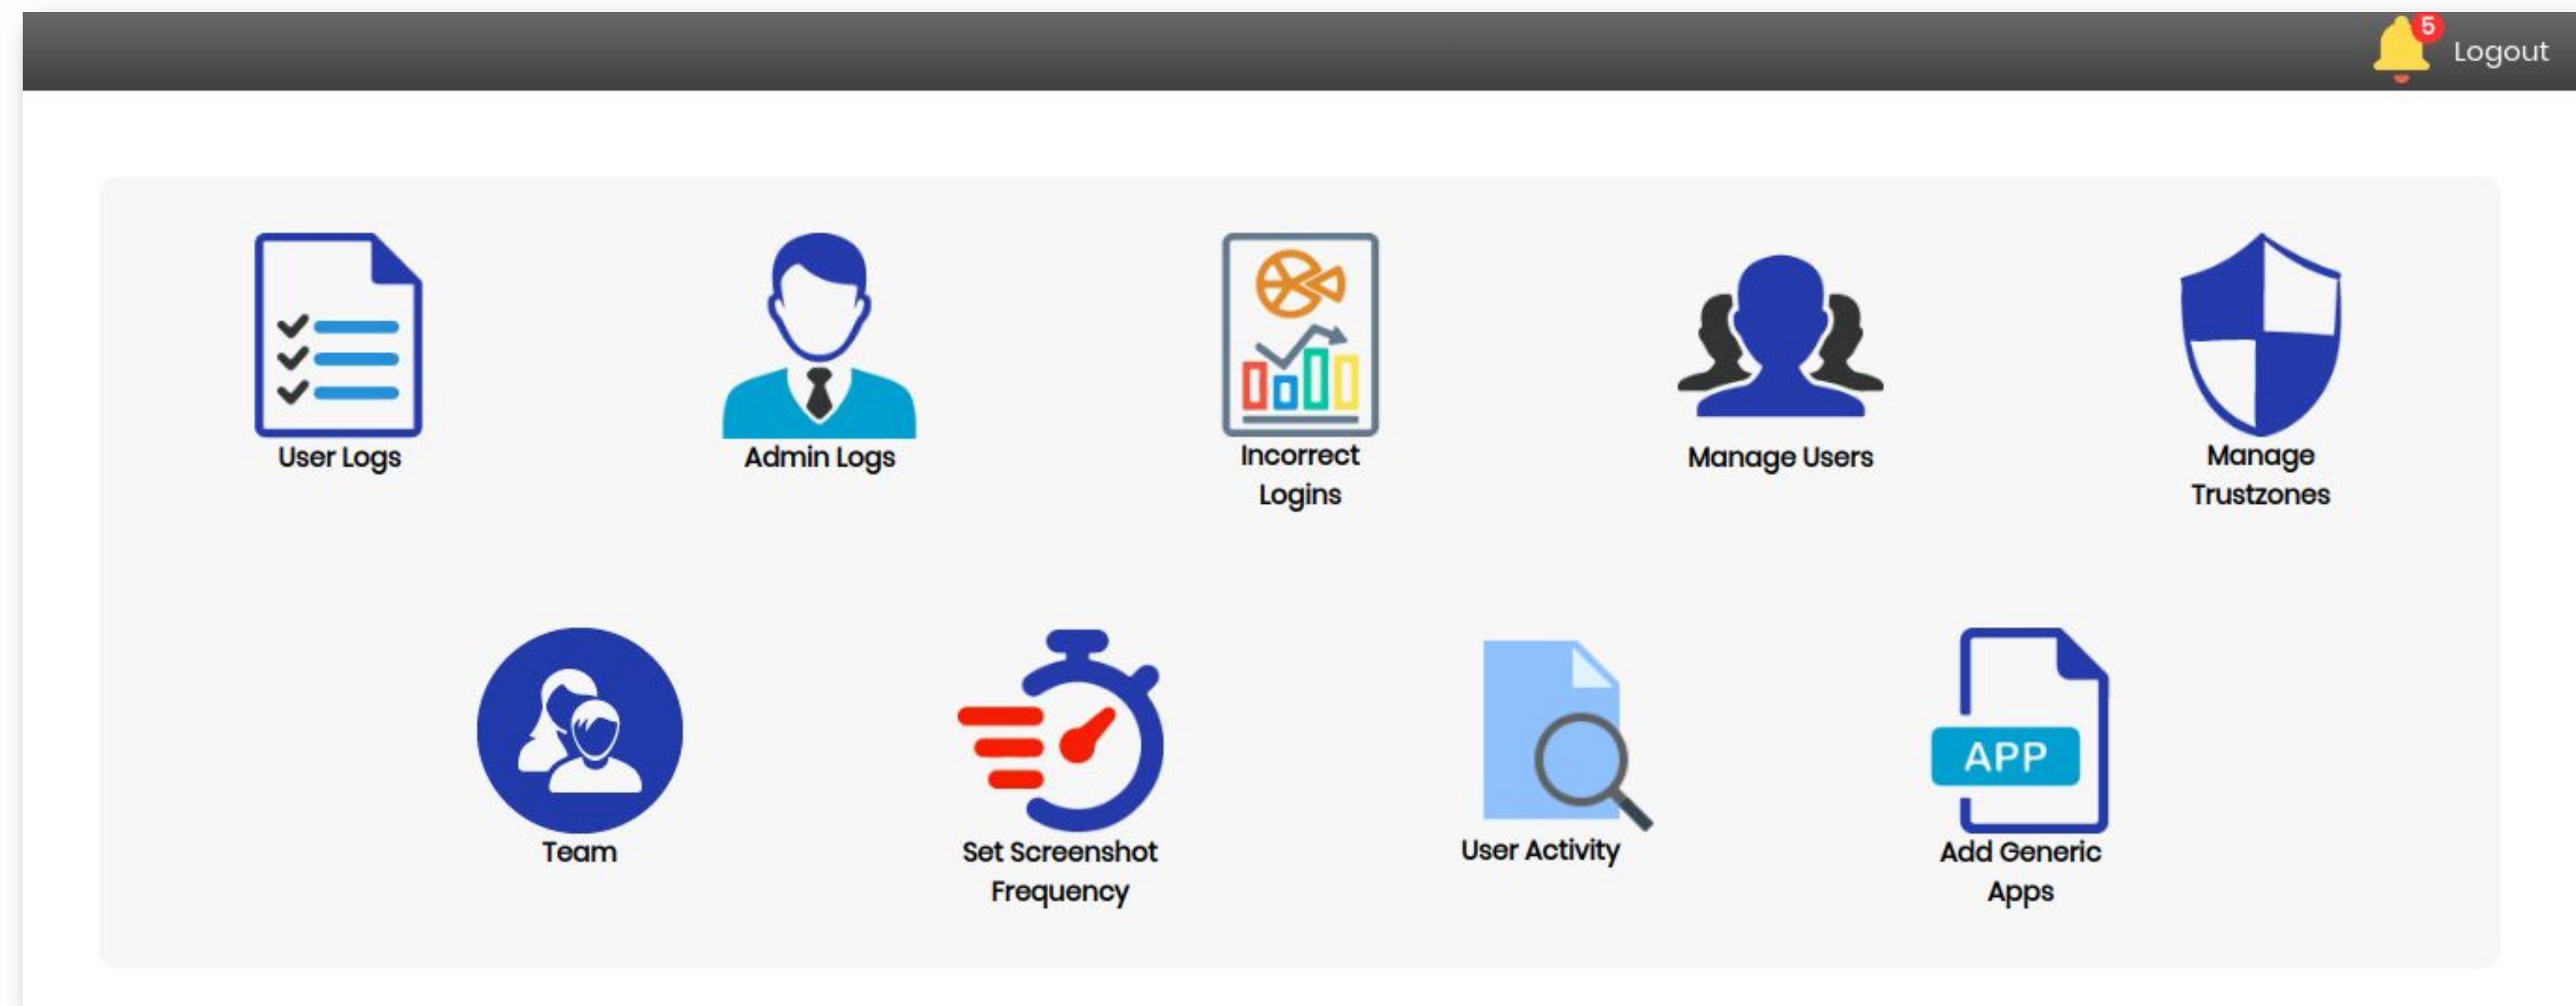

Utilizes the advantages of **Reflection technology** coupled with zero trust cybersecurity

- **LoginCat for Multi-Factor Authentication (MFA)**

Academic Compliance

Have a central admin console for system administration with audit logs for academic reports, accounting and billing purposes.

Easy Setup and Installation

Just install Telescholr agent on a desktop through a simple executable (.exe) file or deploy enterprise wide via a simple virtual machine.

No need to modify the existing network configuration.
