Who are we?

## WHO ARE WE?

### Vision

To continue bringing cutting edge solutions and impeccable service to our global clients.

### Mission

To be a reputable Global Corporation providing quality solutions for business issues using technology and highly skilled people.

### Values

We were founded on three main principles:

- 1) To have a single minded focus on solutions & service.
- 2) To always be forward thinking.
- 3) To provide solutions and services at a reasonable cost to our clients.

## About Us

TekMonks is disrupting the IT industry by offering cutting edge solutions in everything from true AI Cybersecurity to custom built software for our clients. We are consistently bringing our clients innovative software solutions today that is the technology foundation of the future.

Virtual Office

## A complete virtual office – not just remote access

---

**Ease of deployment** – Quick and easy software to allow access to company computers and applications

**Security** – no hackers taking advantage of remote access, multi-factor authentication

**Subtle office discipline** – Can see coworkers working, managers can see their team working. So the productivity of the company doesn't get impacted.

**Reasonable price** – Quick one day to setup

**Audit** – Virtual badge in, badge out, proof of work done – for compliance and administration purposes.

## How it works

# Teleworkr

ข้อดีและประโยชน์ของ  
Teleworkr

## Simple Installation

---

**Just install the Teleworkr Agent on the user's desktops via a central push or the user's can self install.**

**No need to modify the corporate network.**

# Teleworkr

## Benefits

1

### Security

No ports opened in the corporate firewall, no risk. As no one can access the desktops. This is the advantage of using reflection.

2

### Multi-Factor Authentication

Teleworkr supports Multi-factor for logins. So people logging in from home are strongly authenticated.

3

### Nothing to install

No need to make any changes to the corporate network, just install Teleworkr agent on in-house desktops or servers.

4

### Centrally managed

Teleworkr's admin console allows the company to centrally manage which users have access and who does not.

5

### RDP Protocols

100% compatible with Windows OS. Not some proprietary protocol. RDP is sent over fully encrypted tunnel using reflection. So again doesn't allow anyone on the internet to access anything other than authorized users.

6

### No need additional licensing

No need for additional licensing as each Windows license includes 2 RDP licenses for free.
